YURCORE LEARNING

How the YurCore LMS works

What the learning system is, how it is divided, how admins build courses, how doctors learn and earn credits, what the reference documents say about CME credits, and how YurCore implements them.

Part	Contents
1	What the LMS is and how it is segregated
2	Admin side: creating and managing courses
3	Learner side: how a doctor learns, earns credits and certificates
4	The reference material: 2 PDFs and 4 websites, and what each one does
5	How credits are segregated, and how YurCore implements them
6	Automatic emails, reminders, ratings and go-live checklist

Prepared 29 October 2026 for the YurCore team. Describes the system as built and verified in the local environment; nothing has been deployed.

PART 1

What the LMS is and how it is segregated

YurCore Learning is the learning management system (LMS) inside the YurCore practitioner portal. Admins publish clinical courses; doctors take them, and on completion they automatically receive a verifiable certificate and CME credits that count toward a yearly learning target. Everything runs inside YurCore (Supabase database and storage); every course is also mirrored to Moodle so the two stay in sync.

The system is split into five parts, each with a clear owner and job:

Part	Who uses it	Where	What it does
1. Admin course builder	Admins (admin, super_admin)	Admin portal → Learning	Create courses, add content, set categories, credits and feedback, preview and publish
2. Admin learning settings	Admins	Admin → Learning → Learning settings	Categories, yearly targets, certificate issuer, reminders, certificates (revoke / reissue), credit adjustments, email log
3. Learner hub	Doctors (practitioners)	Practitioner portal → YurCore Learning	Learning Setup, course catalogue, recommendations, course player, feedback, certificates, credits and Learning Profile
4. Public verification	Anyone (employer, council)	Public page /verify/certificate/…	Shows whether a certificate is Valid or Revoked, with name, course, credits and date. No login.
5. Automation (server)	The system	Background jobs and email	Issues certificates and credits, sends new-course / completion / reminder / target-met emails and in-app notifications

How the pieces connect

Admin publishes a course → Doctor completes all content → Doctor gives feedback (if enabled) → Certificate + credits issued together → Learning Profile and target update

Data behind it

Data	Holds
Courses, sections, content, quizzes	Course details, structure, lessons and files, quiz questions
Enrollments and progress	Who started which course, which items they completed, quiz attempts
Categories and course categories	The admin-managed category list and which courses belong to which categories
Interests and targets	Each doctor's favourite categories (up to 3) and yearly credit target
Course feedback	One 1–5 star rating (plus optional comment) per doctor per course; also the source of course ratings
Certificates and versions	Certificate number, learner, course, credits, status (valid / revoked), version history
Credit ledger	Append-only record of every credit awarded or reversed; never edited or deleted
Deliveries	Log of every learning email sent, failed or retried

PART 2

Admin side: creating and managing courses

Only admins build courses. The course builder saves as you go; a course stays a **draft** (invisible to doctors) until it is published.

Creating a course, step by step

1	**Open Admin → Learning → Create course** Starts a new draft course (also created in Moodle in the background).
2	**Fill in course details** Title, short and full description, thumbnail image, level (Beginner / Intermediate / Advanced), instructor, duration and learning objectives.
3	**Choose categories** Click existing category chips, or type a new category name and press Add. A course can belong to several categories; the first is its primary category.
4	**Set credits** Enter the credit value (decimal with one place, e.g. 2.5) and the credit type: CME or Participation. Leave 0 for courses that award no credits.
5	**Build the content** Add sections, then items in each section: Video, Image, PDF / Document, File, Text lesson, Quiz, single Question, or Assignment. Drag or use arrows to reorder.
6	**Configure feedback (Feedback tab)** Switch course feedback on to require a 1–5 star rating (optional comment) before the certificate is issued. Set a custom title or leave it to follow the course title. The same tab lists every response with the average rating.
7	**Preview** Opens the real learner player with temporary progress, so the admin sees exactly what doctors will see.
8	**Publish** A checklist blocks publishing while a file item has no file or a quiz has no questions. Publishing makes the course visible to doctors and emails doctors whose interests match the course's categories.

> **Credit snapshot rule**
> Changing a course's credit value later does not change credits already awarded. Each certificate keeps the value at the time of completion.

Managing learning (Admin → Learning settings)

Section	What the admin does there
Categories	Add, rename or deactivate categories. Doctors pick up to 3 at setup. Deactivated categories are hidden from setup and filters; saved choices are kept.
Targets	Set the default yearly target for doctors and the minimum a doctor may choose (both currently 10 CME credits), and the month the credit year starts (default January, IST).
Certificate issuer	Issuer name and address, signatory name and title, signature image, optional accreditation statement (printed only if entered).
Certificates	Search all certificates; download, **revoke** (reason required; adds a negative credit entry and the verify page shows Revoked) or **reissue** (same number, new version, e.g. name correction).
Learner progress and credits	See each doctor's target progress; add a **manual credit adjustment** (positive or negative) with a reason.
Emails and reminders	Turn new-course emails and reminders on or off, set the reminder schedule, run reminders now, see every email delivery and **Retry** failed ones.

PART 3

Learner side: how a doctor learns

Doctors open **YurCore Learning** from the practitioner sidebar. The hub has five tabs: **All Courses**, **My Learning** (in progress only), **Completed Courses**, **Certificates** and **Learning Profile**.

The doctor's journey

1	**Learning Setup (first visit)** Before any courses are shown, the doctor picks 1 to 3 favourite categories and confirms this year's CME target (cannot be below the admin minimum). At the start of each new credit year the target is confirmed again.
2	**Discover courses** The page shows the Annual Learning Target card, then search + category + Filters & Sorting (newest / oldest, favourite categories), then **Recommended for You** (a sideways carousel), then **All Courses**. Each card shows category, status, rating, CME credits, duration, items and level.
3	**Start and learn** Open a course: banner, details, progress, and Start / Continue / Review button. Work through the outline: videos, documents and lessons complete when viewed; quizzes when passed; questions and assignments when submitted.
4	**Give feedback** When all content is complete and the course has feedback enabled, the doctor rates it 1–5 stars (comment optional). This unlocks the certificate. Feedback can be edited later; it is still one rating per doctor.
5	**Certificate and credits issued** Automatically and only once: a certificate numbered AYL-YYYY-NNNNNN with a QR code, and the course's credits written to the doctor's credit ledger in the same database step.
6	**Email and notification** The doctor gets "Course Completed: [Title]" with the certificate attached as a PDF and a Verify Certificate button, plus an in-app notification. If this completion meets the yearly target, a target-met email follows.
7	**Track progress** The course moves from My Learning to Completed Courses. The target card and Learning Profile update; Certificates lists and downloads every certificate; credits can be exported as CSV or PDF for a council or employer.

How recommendations are chosen

- Courses already completed are never recommended.
- First: courses in the doctor's favourite categories.
- Then: courses whose credits best close the credits still needed this year.
- Then: newest courses first.

What the doctor sees on the target card

Item	Meaning
Target	The doctor's credit target for this credit year
Completed	Sum of this year's ledger entries (by completion date)
Remaining	Target minus completed, never below 0 (shown as "+N above target" once met)
Days remaining	Days from today to the end of the credit year (today not counted)
Required pace	Credits needed per 30-day month to finish on time
Status	Target met / On track / Behind (compared with how much of the year has passed)

PART 4

The reference material and what each one does

Six references were provided. Two PDFs define the rules; four websites show how similar platforms present learning and certificates.

#	Reference	Type	Role for YurCore
A	AyurLearn LMS — Certificates, Credits & Learning Profile Spec (27 Oct 2026)	Product spec (PDF)	**Functional blueprint** for certificates, credits, targets and the Learning Profile
B	NCISM Continuous Medical Education Guidelines (30 Aug 2024)	Regulation (PDF)	**Regulatory context**: how CME credit points work for ISM practitioners in India
C	ayurcme.com	Website	Example CME platform: event discovery, certificates, verification, transcript
D	ayurcme.com/events/ayush-cme-panchakarma-foundations-2026	Website	Example CME event page: schedule, hours, credits, completion
E	ayurcme.com/cert/preview	Website	Example certificate layout and fields
F	ayurvidya.aiia.gov.in	Website	Could not be opened (its security certificate is rejected); nothing in YurCore is based on it

A. AyurLearn spec — what it defines

- **Three features:** course completion certificate, course credits, and the Learning Profile (target, credits completed, days remaining, interests).
- **Roles:** learner (doctor), admin, and public verifier (no login).
- **Certificate:** issued automatically once per learner per course when 100% complete; number AYL-YYYY-NNNNNN, unique and never reused; QR code to a public verify page; admin can revoke (with reason) or reissue (same number, new version).
- **Credits:** fixed value per course (one decimal); awarded in the same transaction as the certificate; belong to the year of the completion date; repeating a course gives nothing extra; ledger rows are never edited — corrections are new negative rows.
- **Credit types:** CME and Participation (both count toward the yearly target) and Manual adjustment by admin (counts, with reason).
- **Learning Profile:** target (learner may raise it, not below the admin minimum, stored per year), interests (admin-managed categories), and the formulas for remaining, days remaining, pace and status, in IST.
- **Worked example (27 Oct 2026, target 50, 32 completed):** remaining 18, days remaining 65, pace 8.3 credits / month, expected so far 41.1, status Behind.

B. NCISM CME Guidelines — what they say

- **CME credit points** are allocated by the Board of Ethics & Registration (BoER), NCISM, for CME programmes: conferences, seminars, workshops, hands-on training, publications, patents, textbooks, short courses and fellowships.
- **Renewal rule (reg. 7(8)):** a practitioner needs at least **50 credit points within the 5 years** before each registration renewal, phased in as shown below.
- **Who can organise CME:** BoER NCISM, State / UT ISM councils (with BoER approval), registered organisations older than 10 years, institutions older than 25 years with top NCISM rating, and government organisations.
- **Certificates** are issued only after the CME is complete, never on the first day; a soft copy may be offered for download.
- **Points are tentative** and decided by BoER at its sole discretion during scrutiny (relevance, quality, credibility).
- **Electives:** online programmes of 15 hours (5 h teaching + 9 h demonstration / practice / assignment + 1 h assessment), completed within 12 months; one elective per year carries **10 credit points**.
- **Exemption:** practitioners above 70 years are exempt from CME credit points.

NCISM phased requirement for renewal

Registration renewal due	Minimum credit points
On or before 28 Feb 2025	Exempt
1 Mar 2025 – 28 Feb 2026	10
1 Mar 2026 – 28 Feb 2027	20
1 Mar 2027 – 28 Feb 2028	30
1 Mar 2028 – 28 Feb 2029	40
1 Mar 2029 onwards	50

C–E. ayurcme.com — what the platform does

Page	What it shows
C. Home page	A CME platform for Ayurveda practitioners (beta). Approved colleges, associations and hospitals publish online, in-person or hybrid events; practitioners RSVP with name, email and country; every certificate has a unique number and QR code; a lifetime CME transcript across organisers. Credits are issued by accredited *organisers*, not the platform, and users are told to confirm recognition with their licensing board (e.g. NCISM).
D. Event page	"Panchakarma Foundations" online workshop: 14 June 2026, 09:30–13:30 IST (4 hours), four one-hour sessions (Vamana, Virechana, Basti, Nasya / Raktamokshana + Q&A). **4 CME credits** after the organiser confirms attendance; free in the current phase; numbered certificate (AYG-CME-YYYY-NNNNN) emailed as a PDF with a QR verify link; name errors fixed by revoke + reissue.
E. Certificate preview	"Certificate of Participation" (A5 landscape): logo, recipient name, event title and date, organiser, CME credits, certificate number, issue date, "Authorized by" line, QR code labelled "Scan to verify" with the verify URL printed under it.

What YurCore took from these references

- From the spec (A): almost all business rules — certificate number format, QR verify page, same-transaction credits, append-only ledger, targets per year, interests, recommendations and every formula.
- From NCISM (B): the regulatory facts — 50 points over 5 years, the hour-based values for online modules, the 10-point yearly elective, no certificate before completion — and the limits: credits are decided by BoER, so YurCore never claims NCISM accreditation.
- From ayurcme.com (C–E): presentation ideas — course cards with credits and hours, a clean certificate with number, credits, date and QR, a public verify page, a downloadable credits record, and revoke + reissue for corrections. No branding, seals or signatures were copied.

PART 5

How credits are segregated, and how YurCore implements them

How the references segregate credits

Dimension	AyurLearn spec	NCISM guidelines	ayurcme.com
By type	CME, Participation, Manual adjustment	By activity: conferences, online modules, electives, publications, patents, textbooks	CME credits per event
By amount	Fixed value per course, one decimal	By hours and level, e.g. online module 3 to <6 h = 5, 6 h+ = 10; elective = 10	Set by the organiser (e.g. 4 for a 4-hour workshop)
By time period	Credit year (calendar year, IST) with a yearly target	5-year window before each renewal; phased 10 → 50	Lifetime transcript
Who decides	Admin sets course credits and targets	BoER NCISM, at its discretion	Accredited organiser

Selected NCISM credit-point values (tentative)

Activity	Points
Online medical education module, 3 to under 6 working hours (certificate)	5
Online medical education module, 6 working hours and above (certificate)	10
Elective (15-hour online programme; one per year counts)	10
CME / workshop / state or national conference, minimum 3 hours	5
CME / workshop / state or national conference, minimum 6 hours	10
International CME / workshop / conference, minimum 3 hours / 6 hours	10 / 20
Guest lecture (60 min) by foreign faculty of international repute	5
Paper presentation or guest speaker at an international conference	10
Paper in an international or national indexed journal (original article or case report)	10
HPR certificate	5
Author of a chapter / author or editor of a published medical textbook	10 / 50
Registered patent	50

Guidance for admins

YurCore courses are online learning, so the NCISM online-module scale is the natural guide: an admin would give a 3–6 hour course 5 credits and a 6+ hour course 10. YurCore does not compute credits from hours automatically — the admin enters the value per course, because NCISM states the points are decided by BoER.

How YurCore implements credits

Rule	How it works in YurCore
Credit types	Each course is **CME** or **Participation**; admins can also add **Manual adjustments** with a reason. All three count toward the yearly target.
Credit value	Set per course by the admin (one decimal, e.g. 2.5). Shown on course cards, the course page and the certificate.
When credits are given	Only when the certificate is issued: all content complete and, if enabled, feedback submitted. Certificate and ledger entry are written in one database transaction, at most once per doctor per course.
Which year they count for	The year of the **completion date** in IST. A course finished at 11:30 pm on 31 December counts for that year.
Snapshot	The value at completion is stored on the certificate and ledger; changing the course later never changes past awards. Repeating a course awards nothing.

Rule	How it works in YurCore
Ledger	Append-only: the database blocks edits and deletions. A revoke adds a matching negative entry dated like the original, so it reduces that year.
Yearly target	Default 10 and minimum 10 for doctors, both admin settings. Doctors may raise their own target (e.g. 60). Stored per credit year.
Why 10 per year	NCISM asks for 50 points over 5 years and does not set an annual target. 50 ÷ 5 = 10 a year, which matches the 10-point yearly elective. It is a planning aid, not a regulatory number.
Accreditation	YurCore certificates never claim NCISM approval. An accreditation line is printed only if an admin enters one in the issuer settings.

The formulas (all computed on the server, IST)

Value	Formula
Completed	Sum of this credit year's ledger entries (by completion date)
Remaining	max(0, target – completed)
Days remaining	Year end date – today (today not counted)
Required pace	remaining ÷ (max(1, days remaining) ÷ 30) credits per month; hidden when remaining is 0
Expected so far	target × days elapsed ÷ days in year
Status	Target met if completed ≥ target; On track if completed ≥ expected so far; otherwise Behind

Worked example (from the spec, verified in YurCore)

Target 50, completed 32 on 27 Oct 2026: remaining 18 · days remaining 65 · pace 18 ÷ (65 ÷ 30) = **8.3 credits / month** · expected so far 50 × 300 ÷ 365 = 41.1 · status **Behind**. This exact example is covered by an automated test.

Certificates compared

Field	AyurLearn spec	ayurcme.com	YurCore
Format	A4 landscape PDF	A5 landscape PDF	A4 landscape PDF
Number	AYL-YYYY-NNNNNN	AYG-CME-YYYY-NNNNN	AYL-YYYY-NNNNNN
Name, qualification, reg. no.	Yes (doctors)	Name	Yes
Course / event and credits	Yes	Yes	Yes, with credit type
Dates	Completion date	Event and issue date	Completion and issue date
QR code + public verify	Yes	Yes	Yes (Valid / Revoked)
Issuer and signature	Admin settings	"Authorized by" organiser	Admin settings, signature optional
Delivery	Email with download link	Emailed PDF	Emailed as a PDF attachment + Certificates tab
Corrections	Revoke / reissue	Revoke + reissue	Revoke (with reason) / reissue (same number, new version)

PART 6

Automatic emails, reminders and ratings

Email	When it is sent	Sent to
New Course Available: [Title]	When a course is published	Doctors whose interests include one of its categories (once per doctor)
Course Completed: [Title]	When the certificate is issued	The doctor, with the certificate PDF attached and a Verify link
Learning target reminder	Monthly and / or when N days remain in the year (admin settings)	Doctors who have not met their target (once per period)
Congratulations! Your Annual Learning Target Is Complete	When completed credits reach the target	The doctor (once per year and target)

- Every email also creates an in-app notification and is recorded in the delivery log, so it is never sent twice. Failures stay marked failed and can be retried by an admin.
- Emails go through YurCore's existing email function, sent from admin.meyveda@gmail.com once its secrets are set.
- **Course ratings** come only from course feedback: average = sum of ratings ÷ number of ratings, to one decimal; one rating per doctor per course; "No ratings yet" when none. The same numbers show on cards, recommendations and the course page (hover the rating for the star breakdown).

Go-live checklist

Item	Why
Set APP_BASE_URL to the real site address	Email links and certificate QR codes currently point to localhost
Set GMAIL_USER and GMAIL_APP_PASSWORD on the email function	Emails are sent from admin.meyveda@gmail.com
Set LEARNING_CRON_SECRET and schedule a daily call to the reminders job	Reminders run on time even when nobody is using the app
Enter real credits for every course	Existing courses start at 0 credits
Review issuer details and categories in Learning settings	These appear on certificates and in Learning Setup
Optional: apply migration 20261029000000_learning_course_ratings.sql	Moves rating counting into the database; ratings already work without it

Full technical reference: docs/YURCORE_LEARNING.md in the YurCore repository.
